

Census 2023: Key trends & insights

Mike Nuth - Principal Advisor, Research & Evaluation

▲ Pukeariki / Belmont Trig 27/11/2024

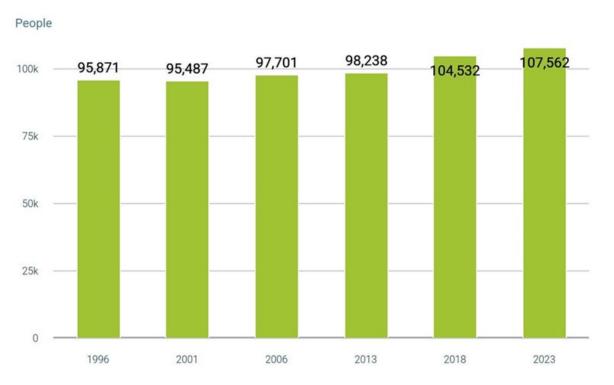

What I am covering

- Key Census 2023 findings:
 - Lower Hutt's population growth
 - Changing population structure (age, ethnicity)
 - Socioeconomic issues identified by the data
 - Implications for Council

Population growth

- 3% growth from 2018 based on residents in Lower Hutt on day of Census.
- Estimated Resident Population vs. Usually Resident Population.
- Sense Partners' projection for Lower Hutt for 2023 = 113,034. Stats NZ's projection 114,030.

Our population is aging

- Our declining birthrate is resulting in our population aged 15 and under to decline.
- Residents aged 65+ are growing as a proportion of our population.
- Population growth owes largely to net migration, and less so on natural growth (i.e. births minus deaths).

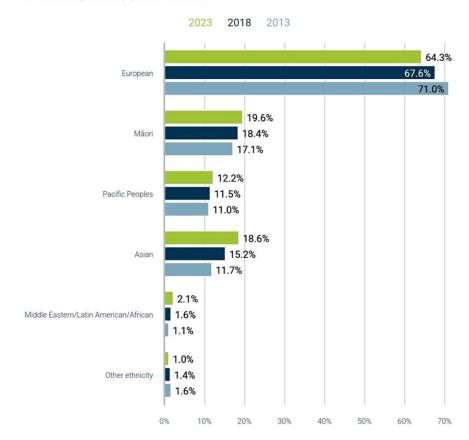

Implication

 What does an aging population mean for Council's provision of services?

Our population is becoming more diverse

- Our European population is declining as a proportion of Lower Hutt's population, while all other ethnic groups are growing.
- 27.8% of our population is born overseas.
- Population growth largely depends on Lower Hutt competing with other population centres.

Implication

 How do we ensure that Lower Hutt remains an attractive place to live?

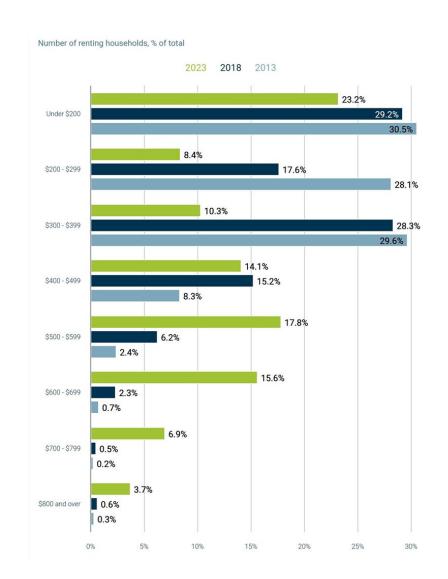

Rental market inflation

- Census data indicates the extend of rental market inflation since 2018.
- Low-income households are especially vulnerable.

Implication

 What is happening to low-income households in an inflated rental market?

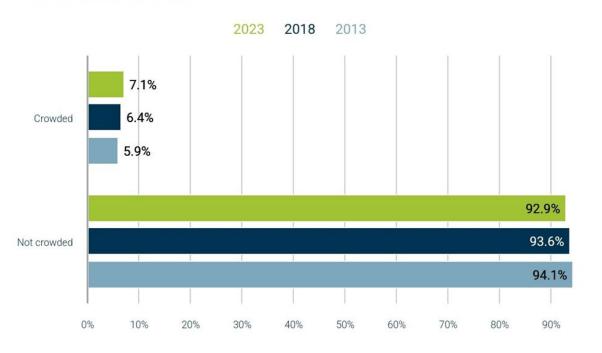

Household crowding is increasing

- Census 2023 tells us that household crowding in Lower Hutt is increasing.
- In 2023, 2,664 households in Lower Hutt (7.1% of all households) experienced crowding. This is an increase of nearly 400 Lower Hutt households experiencing crowding since 2018.

Question

Which areas of the city are most affected?

Number of households, % of total

Crowding in high deprivation areas

Families and households, Household crowding index: Crowded for wards in Lower Hutt City

Area	2023		2018		2013

% of total

Personal incomes in Lower Hutt are increasing

- Since 2018, there has been a significant increase in the proportion of residents earning more than \$50,001 per year and a decrease in those earning \$50,000 or less.
- The most notable growth is in the number of residents earning \$100,001 or more annually.
- Changes in total personal income levels suggest that Lower Hutt may be attracting high-income individuals from other population centres (e.g. Wellington).

Question

 Why are personal incomes increasing? (inflation and migration)

The Lower Hutt population is becoming more qualified

- There has also been growth since 2018 in the proportion of residents who have a bachelor's degree or a post-graduate qualification, and a decline in the proportion of residents who do not have any qualifications.
- Qualification data further suggests that Lower Hutt has experienced internal migration from tertiary qualified professionals looking for a more affordable place to live.

Conclusion

- Lower Hutt's population growth is largely from net migration rather than from natural growth.
- Our population is becoming more ethnically diverse but is aging as our birthrate declines.
- Lower Hutt appears to have experienced an increase in the migration of tertiary qualified and high-income earners to Lower Hutt since 2018 (probably from Wellington).
- Rental market inflation appears to have placed a burden on low-income households, with a probable causal relationship with an increase in household crowding (esp. in Taita).

What Hutt City Council needs to think about

- What does an aging population mean for Council's provision of services? How do we cater for an aging population?
- Given that our population growth largely depends on migration, how can Lower Hutt maintain its competitiveness as an attractive place to live?
- How can Council help ensure that all residents can live comfortably in Lower Hutt, regardless
 of their socio-economic status?
